Strengths and career goals

Full-Stack Developer, highly motivated individual, open to new challenges, quick learner, team-oriented, with good communication skills, and with a good eye for design. Passionate about technology and solving technical challenges. Open for a position as Frontend or Full-Stack developer.

Skills

HTML5, CSS3, SCSS, Bootstrap, JS, PHP, React, Typescript, Laravel, Express, MongoDB, MySQL, Docker, Git, GitLab, GitHub, Node, Web Design, and Web Deployment. Experience with Microsoft, Linux, and Mac operating systems.

Work Experience

Credit Network & Finance (CNF), remote, Bari, Italy
Full-Stack Developer   **10.2022 – present**

- Frontend, Backend, and Database Development, Testing and Deployment
- Managing and developing functionalities for internal existing projects
- Developed applications for managing internal tasks and documents.
- Implementing new functionalities for B2B platforms for both tax unit and for the local communes.
- Building a new application for end users/public to check accounts with authentication and manage workflows. Functionalities implemented are:
    - Authentication workflow
    - Multi-step form where the end user can schedule appointments based on the services required, confirmation email, and calendar attachment
    - Admin can schedule the yearly appointments
    - Administration area with a filtering system to research and manage the appointments.

Intern Software Developer   **05.2022 – 09.2022**

- Developed application for the Tax unit for the digitalization and management of workflow. Features developed: assigning different tasks to team members within the system, email notifications and reminders to the law department, data visualization using React, import/export CSV files from/into the database, search and admin functionalities in the platform

- Implemented an application that enables and manages the different phases of the appeals process for the debt collection unit, allowing the team to upload files and store different information based on the status of the current phase
- Implemented modifications for existing application: login authentication using Speed (national Italian authentication system), creation of database of internal projects.
- Updated design of CNF internal applications.
- Mentored and supported fellow intern due to experience levels
- Technologies used: React, React Redux, Bootstrap, Tailwind, Laravel, Laravel Scout. Git, MySQL, Linux Ubuntu Operating System.

Full-Stack Projects

Aulab Projects, Bari, Italy   **07.2021 - 01.2022**

- **E-commerce** – MERN Stack E-commerce Application. Features: Auth with Google Firebase, Advanced Search Filter panel, Admin and User Dashboard, Stripe payments, Mobile Responsive, Add Cart, Checkout, CRUD New Product, create coupon, Review System and download invoice pdf.
- **Rehactor** – React Web Game Streaming Application. Features: Login Page, Register Page, Video Streaming, Join Streaming Room, Home page, Detail Page, Search by text or category for a specific game.
- **Presto** – Web Announcement App similar to Subito.it. Features implemented: image resizing, muti image upload, watermarks, search full text, registration, login, contact form, photos analysis by Google Vision API, revisor page with progress bar to displaying the data from Google API, multi-language.
- **Blog** – Web Blog App is a Laravel project developed during the Aulab Academy. Main UI functionalities are login, registration, CRUD of a published article.
   Tech Stack: Laravel 8, Laravel Fortify, MySQL, CSS, Bootstrap, Git, Scrum Framework, JS and some with React, Redux, MERN, Laravel Passport, Spatie Media Library, Dropzone.js, Laravel Scout.

Propulsion Academy, Zürich, Switzerland   **11.2020 – 02.2021**

- **Student Performance Tracker** – An application to be used by Propulsion Academy to track students' performance and grades.
- **Luna** – A restaurant review application where users can find, rate, and comment on local restaurants.
- **Motion** – Social media Full-Stack project independently performed, where users are enabled to follow, submit a friend request, create and like a post.
- All projects: for **Frontend** used React, Node, and Redux. For **Backend**, used Django, PostgreSQL and REST Framework. For **Source-code management**, used GitLab. In **deployment process**, used Docker.
